

"I sprayed 5 pounds SEA-90 per acre at a cost of \$4 per acre, and grazed 73 head of cattle on an 8-acre pasture for six days. When I moved the cattle off, there was still enough grass left to bale hay. I also offer SEA-90 to my cattle as a mineral and they look better than ever!"

Mitch F, Greenbrier, AR

"By adding 5 pounds SEA-90 per acre to my liquid row support solution for corn, my production went from 135 bushels per acre to 165 bushels per acre. I am impressed by the increased yield and know it must be the SEA-90!"

Nathaniel S, Humboldt, IL

"SEA-90 saved me 50% on my fertilizer costs while almost doubling my production after I sprayed my hay with 5 pounds of SEA-90 at less than \$4 per acre."

Merle G, Summers, AR

"After using SEA-90, my fruit trees had more foliage, larger and more uniform fruit and less insect damage. Our grape vines are more plentiful and ripened more uniformly. I'm sold!"

Allan B. Kirkland, IL

"Last year I spread SEA-90 by hand on my lawn, around my shrubs and in my garden. I also fed the sea minerals to my chickens. Even though we had a terrible drought with a water ban, our grass and shrubs stayed green. The garden produced excellent vegetables and our chickens grew better than ever. They actually looked like small turkeys and the meat was tender and delicious."

S. Vander Heiden Hampshire, UK

All Livestock & Poultry Thrive on SEA-90 Pasture

INCREASE PRODUCTION AND DECREASE FERTILIZER COSTS

SEA-90 sea mineral solids are naturally produced from pristine ocean water. Intense solar dehydration removes the water. Rain never touches SEA-90 guaranteeing the vital minerals and trace elements are in the quantities and perfect proportions found only in ocean water.

SEA-90 is a result of the research provided by Maynard Murray MD, (1900-1982), a scientist and pioneer of sea energy agriculture. Early in his medical career, Dr. Murray realized that Americans were living longer but chronic illness and degenerative disease were steadily increasing. He found that soils and the food grown therein had become critically mineral deficient due to erosion, leaching, and poor soil management. Farmers were using greater amounts of fertilizer and harmful chemicals in order to increase the production yield, yet the results were mineral deficient crops and livestock. Dr. Murray theorized that the condition of human health is directly related and linked to the minerals and trace elements found in food.

Dr. Murray learned that ocean water contains 85-92 naturally balanced minerals and trace elements, and sea life living in unpolluted areas of the oceans rarely exhibit symptoms of degenerative disease. Theorizing that there is a symbiotic relationship between the ocean minerals and healthy life, Dr. Murray began experimenting with sea minerals for the purpose of remineralizing soils and crops.

In order to conduct his research experiments, Dr. Murray required a source of dry sea minerals (sea solids). Fortunately, he found one location in the northern hemisphere where sea solids are created naturally by solar dehydration from pristine ocean water and he began to prove his theories. After thirty years of agricultural research, he concluded that soils and crops fertilized with sea mineral solids grow superior to those produced conventionally. The soils and crops exhibited increased yields, significant natural disease and insect resistance, and analyses indicated increases in vitamins, sugars and proteins. Dr. Murray additionally discovered that livestock appeared to prefer sea mineral enriched feed to

that grown conventionally. The livestock consumed less and matured earlier.

Dr. Murray's sea mineral solids, now trademarked **SEA-90**, is a 100 percent natural and water-soluble mined mineral listed by the Organic Materials and Review Institute for the production of all organic food and livestock. **SEA-90** sea mineral solids are produced bi-annually in a pristine location from fresh sea water rich in minerals and trace elements. Intense solar dehydration removes the water, and rain never touches **SEA-90** guaranteeing the vital minerals and trace elements present are in the quantities and perfect proportions found only in ocean water.

Learn more about Dr. Murray's research and results in his book [Sea Energy Agriculture](#), and Charles Walters' book [Fertility From The Ocean Deep](#) available from SeaAgri or ACRES USA.

SEA-90 quickly dissolves to disburse the sea's full spectrum of vital minerals and trace elements into the soil following a thorough rain or watering, as well as dissolves easily for foliar and drip applications. In addition, **SEA-90** can be offered free choice to livestock or mixed into feed and mineral supplements.

APPLICATION INSTRUCTIONS

SEA-90® Essential Mineral

Replaces salt in rations. Dissolve one pound per 250 gallons of drinking water for added benefits.

All Cattle, Sheep, Hogs, Goats:	Offer free choice or two ounces per day in feed
Dairy Cows:	3 ounces twice daily
Horses:	14 lbs per ton feed
Turkeys:	15 lbs per ton feed
Chickens:	10 lbs per ton feed

SEA-90® Fertilizer

Foliar Application Rates:

Cost < \$5 per acre!

Dissolve specified amount of **SEA-90** in 10-20 gal water (some particles may remain). Filter if necessary.

Hay & Pasture:

5 lbs per acre at greenup and after each cutting

Row Crops:

3.5 lbs per acre every 14 days

Liquid Row Support:

6 lbs per acre at time of planting

Small Fruits & Tree Fruits:

2.5 lbs per acre every 7-10 days

Garden, Wheat Grass & Sprouts:

1 tsp per gallon applied every 7 days

Garden & Soil Mixes:

3/4 lb per 100 sq ft tilled into the soil each spring.

One tsp per gallon soil mix.

Additional Application Info:

Contact us for additional information for soil remineralization, compost, drip irrigation, compost tea and nutrient solutions.
